Art Unit: 1763

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-11, drawn to a method for making a semiconductor device, classified in class 438, subclass (+).
  - II. Claims 12-30, drawn to a semiconductor device, classified in class 257, subclass 1 (+).

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by materially different process such as one in which a lift-off process in combination with a patterned mask is used to form the shank on the device which is claimed by the applicant in the place of the etching process which is specifically claimed by the applicant.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).
